Create new  
habits at your  
workplace

The CombiPlum Electronic dispenser is available on an elegant and movable floor stand so that you can place it just where the need for clean hands is required.

# Availability is the key to improved hand hygiene and reduced absence due to sickness

Hands are the most important source of infection. Break the chain of infections with the right tools. It may be soap. Or disinfection. And preferably both – if possible with touch free operation.

Bacteria and viruses are present everywhere – on door handles, keyboards, mobile phones and soap dispensers. Colleagues pass on infections to each other. Thus we are carriers already before the cold breaks out. If you want to limit infections at the workplace and in other crowded places, you should make soap and disinfection readily available. And create new habits. That is the road to fewer days off due to sickness.

The less you need to touch, the more certain you are to avoid transferring bacteria and viruses. The struggle against infection therefore starts with a CombiPlum Electronic dispenser with touch free operation. Just hold your hand under the dispenser and you will automatically get the right amount of disinfection or soap. Quick and easy in a busy workday.

You can mount CombiPlum Electronic at the sink, in the corridor, in the reception, in the canteen, or other crowded places. Directly on the wall or on the moveable floor stand.

## Let disinfection and soap pair up

Soap is needed to remove the visible dirt. And disinfection to remove the invisible dirt. That is a good rule of thumb – and the reason why soap and disinfection go well together.

## First-class design and hygiene

### Elegant and easy-to-clean solution

The design is not just beautiful, simple and Scandinavian. CombiPlum Electronic also sets new standards as far as function is concerned. The solution is flexible and able to cover the need of numerous industries from hospitals and food companies to public toilets and offices. The dispenser surfaces are smooth and easy to clean, which also contributes to good hygiene. When the indicator at the front of the dispenser is lit constantly, the batteries must be replaced. This facilitates the maintenance and creates safety for the user.

The dispenser is designed to fit elegantly into any environment.

## Available in two models

### CombiPlum Electronic with and without cover

Choose between a dispenser with or without cover. The dispenser with cover is provided with a sheet of labels to indicate clearly whether the dispenser contains soap or hand disinfection.

On the cover or at the top of the floor stand, you can add your company's logo or write relevant messages which will help the users to remember the new habits – for example "Remember to disinfect before you eat".

# Healthy skin systematized

An investment in one of our dispenser solutions will give you 40 years of experience in hand hygiene solutions into the bargain. We know what your hands are worth. And we see it as our most important task to make sure that you can clean and take care of them – so that they will stay healthy throughout life. Therefore, environmentally friendly, mild and efficient products are part of our total solution. The products are packed in air-tight, hygienic disposable bags which will prevent bacteria growth and result in minimum waste. Below you will find our range of soap and disinfection products suitable for CombiPlum Electronic.
